

HOW TO FORMAT HARD DRIVE ON WINDOWS 10

The **External Hard Drives** are used to back up important data like documents, photos, and videos and give you more storage space to keep your data. When you store data on an external hard drive, you can only access it when the hard drive is plugged into your computer. Before you use an external hard drive on your computer, you need to format the drive windows 10. To do so on your Windows 10 computer, just perform the below instructions carefully.

| Basic hard drive USB connection problem

- Make sure to connect the external drive to your Windows 10 computer.
- Select the Start menu on your computer.

- Type Run into the search bar at the bottom of the window.
- Now, type compmgmt.msc into the respective field and hit the Enter key on the keyboard.
- Here, you will see the Computer Management window on the screen.
- Select Disk Management below the Storage section.
- Next, right-click on your external hard drive and click on the Initialize Disk option from the list. **more**.....
